DESCRIPTION

The CircuitSolver® Union Cold Water Assembly with thermometer's primary component is the CircuitSolver® Cold Water valve which is a self-acting thermostatic recirculation valve that automatically and continuously adjusts flow to maintain the desired temperature in a domestic cold water supply line. Since the CircuitSolver® responds to water temperature to control the flow entering the recirculation line it eliminates the need to manually balance the system.

Model Number Selection

XXX refers to the desired opening temperature. When the water temperature rises above this point the CircuitSolver® will begin to open, allowing water to easily enter the return line. For example, if you want 65°F desired return temperature and the CSUA-CW-TW is to be installed on a 3/4" line, the model number would be CSUA-CW-3/4-65-TW. To add optional check valve insert –CV1 directly after the temperature designation in the model number, Ex. CSUA-CW-3/4-65-CV1-TW.

TYPICAL SPECIFICATION

I. Furnish and install CIRCUITSOLVER® UNION COLD WATER ASSEMBLY WITH THERMOMETER as indicated on the plans. CIRCUITSOLVER® UNION COLD WATER ASSEMBLY WITH THERMOMETER shall be self-contained and fully automatic without additional piping or control mechanisms. Thermostatic valve shall be a CIRCUITSOLVER® as manufactured by ThermOmegaTech®, Inc., or equivalent.
   A. CIRCUITSOLVER® UNION COLD WATER shall regulate the flow of recirculated domestic cold water based on water temperature entering the CIRCUITSOLVER® UNION COLD WATER ASSEMBLY regardless of system operating pressure. As the water temperature increases, the valve proportionally opens, dynamically adjusting flow to meet the specified temperature.
      1. CIRCUITSOLVER® COLD WATER never fully closes. There is always sufficient bypass flow back to the recirculating pump to prevent overheating or "dead heading" of the pump.
      2. CIRCUITSOLVER® COLD WATER is set at the factory for the desired return temperature. No field adjustments needed. Several temperature set points are available.
      3. CIRCUITSOLVER® UNION COLD WATER ASSEMBLY shall be available in ½", ¾", & 1" with FNPT at both ends.

II. All components in the CIRCUITSOLVER® UNION COLD WATER ASSEMBLY are made with lead-free materials. The major components that make up the CIRCUITSOLVER® are constructed of type 300 series SS.
   A. CIRCUITSOLVER® UNION COLD WATER ASSEMBLY shall be rated to 200 PSIG maximum working pressure.
      1. CIRCUITSOLVER® UNION COLD WATER ASSEMBLY shall be standard tapered female pipe thread, NPT.
   B. CIRCUITSOLVER® UNION COLD WATER ASSEMBLY shall be rated to 250°F (121.1°C) maximum working temperature.
   C. CIRCUITSOLVER® UNION COLD WATER ASSEMBLY shall be NSF/ANSI/CAN 61 & 372 certified for use in all domestic water systems.
   D. Thermal actuator shall be spring-loaded and self-cleaning, delivering closing thrust sufficient to keep orifice opening free of scale deposits.

III. Installation of CIRCUITSOLVER® UNION COLD WATER ASSEMBLY shall be made by qualified tradesmen. Install CIRCUITSOLVER® UNION COLD WATER ASSEMBLY in each domestic cold water return piping branch beyond last cold water device in that branch.
   A. Provide suitable strainer as indicated in piping detail shown on the drawings.
   B. Provide suitable access panel as required in non-accessible ceilings and walls.
   C. Pay close attention to flow arrow, especially with valves that have an integrated check valve.
